

BYON Microchip Tracking System (MTS)

Introduction

Byon MTS is a professional Microchip Tracking Software that is suitable for a large scale of 2-way communication between pets' owner and registered pets. Byon MTS has the ability to manage multiple sites via. LAN/ WAN / Cellular communication and will guarantee Stable Performance even during Emergency Situations.

Byon MTS provides data registering / filtering / tracking / and reports management in a single platform. It is seamlessly integrated with Microchips, mobile applications both IOS and Android, and web application. The system can be configured as a single server, dual redundant servers, along with multiple servers and clients editions.

Byon MTS provides various enhanced security system features that are highly secured. Within the software, specified Authorized level setting could be set to the users. With real-time event of an emergency situation, mapping on the mapping platform will allow those who are eligible to access the feature to track and trace the relationship and location of pets' owner and pets itself.

Mobile applications both IOS and Android version are fully integrated with MTS database to allow pets owner to register, request, communicate, and mapping by themselves. While Officers are able to monitor all request transactions realtime using web application or server-client based.
